REC\_DS using C\_Week 7\_COD\_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

### 1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

## **Input Format**

The first line contains two integers, n and table\_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

#### **Output Format**

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

#### Sample Test Case

```
Input: 5 10
21 31 41 51 61
3
31 60 51
Output: Value 31: Found
Value 60: Not Found
Value 51: Found
Answer
#include <stdio.h>
#define MAX 100
void initializeTable(int table[], int size) {
  for (int i = 0; i < size; i++) {
    table[i] = -1:
  }
}
int hashFunction(int num, int size) {
  return num % size;
```

```
int linearProbe(int table[], int size, int num) {
   int index = hashFunction(num, size);
    while (table[index] != -1) {
      index = (index + 1) \% size;
    return index;
 }
 void insertIntoHashTable(int table[], int size, int arr[], int n) {
    for (int i = 0; i < n; i++) {
      int index = linearProbe(table, size, arr[i]);
      table[index] = arr[i];
int searchInHashTable(int table[], int size, int num) {
    int index = hashFunction(num, size);
    while (table[index] != -1) {
      if (table[index] == num) {
         return 1:
      index = (index + 1) \% size;
    return 0;
 int main() {
    int n, table_size;
   scanf("%d %d", &n, &table_size);
    int arr[MAX], table[MAX];
    for (int i = 0; i < n; i++)
      scanf("%d", &arr[i]);
    initializeTable(table, table_size);
    insertIntoHashTable(table, table_size, arr, n);
    int q, x;
    scanf("%d", &q);
    for (int i = 0; i < q; i++) {
    scanf("%d", &x);
      if (searchInHashTable(table, table_size, x))
        printf("Value %d: Found\n", x);
```

return 0; } Status : Correct	ie %d: Not Found\n", x);	240701370	240 <sup>TO13TO</sup> Marks: 10/10
